

Re-entry Navigation Case Plan: Dillon Johnson

Staff Lead: Lead Re-entry Navigator & Forensic Clinical Specialist

Facility / Program: Turn90 / First Shift

Supervision Status: Active Probation (Turn90 Condition)

Overall Risk Level: High

1. Clinical Overview & Criminogenic Targets

Dillon presents with a high risk profile driven by three dynamic criminogenic targets:

1. **Education/Employment:** Unemployed over the past year with a history of losing jobs due to interpersonal conflict, attendance issues, and manager altercations.
2. **Alcohol/Drug Problem:** Heavy cannabis/edible use used as a primary coping mechanism, causing degraded mental health and financial strain. Recent use reported in May 2026.
3. **Procriminal Attitude/Orientation:** Impulsive "Cut Off" decision-making, high sensitivity to perceived disrespect, rapid escalation to property damage/threats, and a history of probation violations.

Note on Static Risk: Dillon's criminal history and age of first justice involvement (19) are static risk factors and will be used solely for baseline risk context, not dynamic intervention targeting.

2. Facilitation & Intervention Strategies (CBT Standards)

- **Modeling Neutrality (Standard 1.5):** Staff must remain completely non-reactive during outbursts or anti-social statements. Avoid debating Dillon or challenging authority defiance head-on. Use non-judgmental reflective statements (e.g., *"When you respond to a supervisor that way, how does that affect your goal of staying off probation?"*).
 - **Managing Resistance & Buy-In (Standards 3.2 & 18.0):** De-escalate authority friction by validating his feelings of frustration without validating destructive actions. Frame every program rule, employment task, and probation requirement in terms of his personal self-interest (retaining income, staying out of jail, securing independence).
 - **De-escalation Protocol:** When Dillon shows signs of emotional volatility or triggers (feeling ignored/slighted), enforce a calm time-out space and guide him through CBT thought-restructuring workbooks to identify the "Cut Off" thinking cycle.
-

3. Immediate Stability Action Plan

1. **Substance Use Support:** Refer Dillon to Charleston Center (DAODAS) for intensive outpatient support and relapse prevention planning.
2. **Mental Health Management:** Verify Dillon is taking Hydroxyzine consistently as prescribed for anxiety; establish primary care via Fetter Health Care Network.
3. **Transportation Mapping:** Assist Dillon in securing a CARTA bus pass and aligning employer targets strictly within CARTA route corridors.

4. **Legal & Driver's License Recovery:** Connect with SC Legal Services and Father to Father Project to review SCDMV reinstatement steps.
