

CASE MANAGEMENT REENTRY BRIEF

PARTICIPANT: CLYDE WILLIAMS (DOB: 07/30/1989) | HIGH RISK REENTRY PROFILE

Assessment Date:	August 18, 2026	Current Placement:	Residential (Lives with Girlfriend)
Reentry Status:	Currently Unemployed	License Status:	Suspended / None
Supervision Status:	Parole (18 Days Home, 15-Yr Violent Burglary Sentence)	Final Risk Level:	HIGH RISK / NEED (Score: 21 / 43)

1. RISK PROFILE & CRIMINOGENIC DOMAINS

Clyde Williams's standardized LS/CMI assessment calculates a Section 1 Total Score of **21 / 43**, placing him in the **High Risk/Need** category (up from Medium, due to active community unemployment and clinical indicators of poor self-regulation). While he possesses major historical and systemic risks, he exhibits exceptional cognitive strengths and social protective factors that can be actively leveraged during his transition. Per clinical instructions, his high Criminal History score (6/8) is excluded from case planning targets, establishing the following prioritized criminogenic focus areas:

Primary Domain: Education & Employment (EE Subscore: 7/9): Clyde completed some high school but lacks a high school diploma or GED. He is **currently unemployed** and has worked 0 payroll months in the last 12 months due to his recent 15-year incarceration. Under the scoring manual rules, his active unemployment forces his performance, coworker, and supervisor interaction ratings to 0 (very unsatisfactory). Securing stable transitional employment and addressing his GED deficit are his highest priority criminogenic needs.

Secondary Domain: Antisocial Pattern (AP Subscore: 3/4): Clyde exhibits an ingrained antisocial pattern. This is driven by his first arrest at age 14, a violent property offending history (Burglary 1st), multiple prison behavior reports (cell phones and marijuana), and specialized clinical concern for poor self-regulation and personality-behavioral deficits (Item 40 = YES). While he currently reports high self-regulation, his underlying behavioral patterns represent a severe default default response under stress.

Tertiary Domain: Companions (CO Subscore: 2/4): An estimated 90% of Clyde's current social network is involved in criminal activity to this day. Clyde is currently managing this risk through extreme self-isolation ('I don't have friends' and 'I don't talk to strangers'), but he requires active clinical support to transition out of this isolation safely by building prosocial, law-abiding connections.

2. BEHAVIORAL INDICATORS & THINKING PATTERNS

Clyde exhibits a complex cognitive profile characterized by a strong tension between his current strategic goals and his deeply ingrained antisocial behavioral defaults:

'Chessboard' Decision-Making (Cognitive Strength): Clyde operates with extremely high current self-regulation and planning. He explicitly states: *'I think before every move now like a chessboard. I think before everything, I'm very strategic.'* He writes down his plans and goals in his phone and checks them regularly. This highly reflective planning skill is a powerful protective asset that case management must actively leverage and reinforce.

'Cut Off' Tendency (Risk Pattern): Historically, Clyde has a tendency to walk away, quit, or react with physical aggression when facing extreme frustration or authority pressure. His background of early school suspensions, physical fights with police/corrections, and prison infractions represent an ingrained 'Cut Off' pattern. Staff must monitor him for signs of

frustration and provide cognitive coaching to prevent him from reverting to these defaults under transitional stress.

'Justifying' Cognitive Distortions: Clyde exhibits a strong, principled resentment of parole supervision, arguing it is unfair because he completed 100% of his sentence: *'I did 15 years 85%. So I don't understand why I would be under any supervision.'* While fully compliant, this resentment, combined with his view that his past property crimes were merely a 'selfish learning stage' that he 'had to go through,' represents a 'Justifying' thinking pattern. This cognitive distortion allows him to rationalize non-compliance if he perceives authority actions as unfair.

Defensive Selective Isolation: To insulate himself from negative peers, Clyde has set an extreme boundary: *'I don't have friends. I don't talk to strangers.'* While this boundary successfully prevents procriminal peer influence, it also leads to severe social isolation, which can increase depressive or emotional stress and lacks long-term prosocial support.

3. TRAJECTORY & PATTERN OVER TIME

Clyde's justice involvement began early at age 14 with a juvenile disposition. In adulthood, his involvement escalated rapidly into violent property crime, culminating in two major convictions: Burglary Second Degree (3-year sentence) and Burglary First Degree (15-year sentence, 85% violent). In total, Clyde has spent 18 years of his adult life incarcerated and has been home in the community for only 18 days. This intensive long-term institutionalization means that conventional, non-institutional living skills are highly unpracticed. The goal of case planning is to disrupt this longitudinal cycle by securing immediate, stable conventional roots in the community.

4. ACUTE / EMERGENCY NEEDS

Active Unemployment & Financial Stabilization: Because Clyde is currently unemployed and has 0 active income, he is in an acute financial transition. He possesses food stamps but has no independent means of support, relying entirely on his girlfriend. Securing immediate transitional employment (such as re-enrolling or stabilizing his Turn 90 placement) is his primary acute need to ensure immediate housing and financial stability. No active housing, mental health, or substance use crises are identified.

5. STRUCTURAL STABILITY FACTORS

Several highly favorable structural stability factors act as protective shields in Clyde's life, offsetting his high-risk profile:

- **Housing Stability:** Extremely high. Resides with his girlfriend in a residential house that he describes as 'nice, clean, and very peaceful.' This low-stress environment is a critical protective asset.
- **Financial Literacy:** High. Clyde has Navy Federal checking and savings accounts and manages a tight personal budget effectively (spending ~\$600/month on hygiene and necessities): *'I've did 15 years, so all I know is budget.'* However, his credit score is low (429), requiring credit rehabilitation.
- **Substance Abuse Stability:** High. Clyde is a lifelong abstainer from drugs and has controlled, occasional recreational alcohol habits (wine) with absolutely no social, medical, or legal impairment.
- **Transportation Barrier:** High. Lacks a driver's license, meaning all supervision and work commitments rely strictly on walking, public transit, or his girlfriend. This is his primary physical barrier.
- **Education Deficit:** High. Lacks a high school diploma or GED, limiting commercial contracting utilization of his Brick Masonry NCCER Core certification.

6. LEGAL & PLACEMENT CONSTRAINTS

Clyde is under active parole supervision following his release 18 days ago. His legal obligations include regular supervision fees and mandatory probation meetings. He currently experiences significant supervision friction due to poor communication from parole officers (*'They don't contact me. I try to call, they don't answer'*). His suspended license severely restricts physical movement and placement opportunities. There are no pending charges or Sex Offender Registry requirements.

7. RESPONSIVITY & ENGAGEMENT PROFILE

Clyde is a highly capable, self-directed client. To successfully engage him and reduce recidivism, staff must utilize a highly tailored communication and coaching strategy:

- **Supportive, Non-Confrontational Coaching Style:** An aggressive, directive, or highly confrontational authority style will immediately trigger his deeply ingrained resentment of unfair supervision and his past history of fighting authority figures. Staff must maintain a highly collaborative, supportive, and respectful coaching approach, treating him as an active partner in his reentry planning.
- **Leverage Strategic Mindset:** Capitalize on Clyde's strategic, planning-oriented mindset. Involve him directly in co-creating his goals. Use his habit of writing down plans in his phone notes to track reentry milestones, GED preparation modules, and cognitive-behavioral therapy (CBT) homework assignments.
- **CBT Self-Regulation & Cognitive Restructuring:** Focus cognitive coaching on addressing his 'Justifying' and 'Cut Off' thinking patterns. Use structured CBT behavior logs to help him track triggers of frustration and practice prosocial, non-aggressive problem-solving skills.
- **Immediate Structural Plan:** Support immediate transitional goals: (1) assist with re-enrollment/stabilization in a paid transitional work program (Turn 90 or alternative) to resolve his acute financial crisis; (2) coordinate GED preparation classes; (3) provide bus passes and transit route coaching; and (4) help him transition his Brick Masonry NCCER Core certificate into local commercial masonry.
